

SPEAKER MATCH SIGNATURE

MANUAL

INTRODUCTION

Steinmusic Speaker Match Signature is a special matching element to bring to perfection the interplay between amplifier, speaker cable, and loudspeaker. Usually, the result is a handier, more articulate sound image across all frequencies, which tends to be mellower and less strained.

In addition to the original Speaker Match, the "Signature" version uses a technology based on quantum physics, which helps to improve the sound even further, and tightly matched custom-made parts. Also, the stability of the massive Maple Wood housing is sonically positive.

USAGE

The use is simple: Steinmusic Speaker Match Signature is connected at the terminal of each loudspeaker in parallel to the speaker cable. Here, the red wire has to be connected to the positive pole and the black wire to the negative pole. Since the wires have already been fitted with Swiss-made hollow banana-type plugs made from beryllium-copper, connecting is a breeze.

1. **First, switch off the amplifier.**
2. **Disconnect the cables** if you use speaker cables with banana-type plugs.
3. **Connect a Speaker Match** to each terminal. The banana-type plugs are hollow from the backside to accept the original plugs of the speaker cable again.
4. **If your speaker cables are fitted with spades**, in most cases, you will find additional retainers/sockets for banana plugs in the clamping screws. Sometimes, these are covered with removable plastic plugs. Such plastic plugs may be removed with a sharp object (a knife or something similar).
5. **If none of these two possibilities work**, you may also get them factory-assembled with spades. Alternatively, you may remove the banana plugs of each Speaker Match Signature by cutting them off with wire-cutting pliers very close to the plugs. Strip the insulation from the red and black wire by about 10mm. After that, you have bare wires to clamp at the terminals of your loudspeakers according to the actual needs.

We wish you great pleasure while listening to your favorite music at a higher level of sound.

FAQ

MAY I ALSO TRY TO USE SPEAKER MATCH SIGNATURE AT THE TERMINALS OF MY AMPLIFIER?

Yes. In most cases, using Speaker Match Signature at the speaker terminals will give the best results. However, sometimes it is just the other way round.

HOW MANY SPEAKER MATCH SIGNATURES SHOULD I USE AT A BI-WIRED OR BI-AMPED SPEAKER?

Using only one pair of Speaker Match Signature in a bi-wired or bi-amped system at the speaker will give an improvement. However, it normally will end up in an imbalance, as the positive effect of Speaker Match Signature is not applied to the complete speaker. Because of this, in a multi-wired or multi-amped system, each way should be equipped with a pair of Speaker Match Signature.
